This year school arranged and started museum based learning for the boys of Classes VII and VIII where boys studied the different materials kept in the museum and natural history society section and related with their CBSE course. They use the museum as a tool for learning different things.

Society members also take boys on campus and out of campus rounds in different seasons to make them understand about the behavior of animals during different seasons and to know about the periodic changes in plants inside the campus and outside the campus.

This year we also started the rabbit park near our school aviary and boys of natural history society pay daily visits to these places look after the different animals in both the places along with the study of animal body shape, size, behavior and reproduction.

We also regularly visit the Mayo lake to study about migratory birds along with the bird watching society members to know more about them.

In our Biology labs we conducted the dissection of frog, non poisonous snakes and birds to show them to the boys and to make them understand the anatomy of these animals and preserve them in the laboratory for further use.
